

PROTECTIVE UNDERGARMENTS  
HAVING ANCHORED POCKETED-  
SLING STRUCTURES AND  
MANUFACTURING METHOD  
THEREFOR

ABSTRACT OF THE DISCLOSURE

A reusable infant or adult diaper comprising an inner anchored pocketed sling structure adjoining an outer shell or pant-type garment. The outer shell or garment fits the wearer's torso and legs, and the inner anchored sling fits and conforms to the wearer's pubic region. One embodiment of the invention includes

5 mechanisms to fasten and remove the anchored sling from underwear. Other embodiments provide novel mechanisms to stabilize and/or anchor the sling when retrofitted to conventional underwear.
